Data Sources: Peoples Data Filter: Data Download:

*** Notes:**

- Joshua Project does not have specific ministry activity data supporting the "Other Progress Indicators."
- Significant effort is made to match photos with people groups. In most cases the photo source has identified the people group. However, in some instances when the exact people group is not identified Joshua Project has made educated attempts at matching. As a result some photos may be representative of the people cluster rather than the specific people group or possibly incorrectly matched altogether. Mismatches are the fault of Joshua Project, not the photographer. Please [contact us](#) if you believe a photo is not matched with the correct people group.
- Discrepancies may exist between "Other Progress Indicators" because of the varying sources of information.
- Percentages may be printed as '0.00%' because of space limitations, but some are slightly greater than zero.
- The exactness of the above numbers can be misleading. Numbers can vary by several percentage points or more.
- People group population figures are now maintained as a percentage of the national population. [Click here](#) for details.
- Joshua Project does not know the exact content of web audio recordings. In general they are Bible reading and teaching.
- As on-site realities are understood, barriers of acceptance may be found in many of the larger people groups that will require multiple distinct church planting efforts.
- This data contains errors and needs continual correcting and updating. [Click here](#) to send feedback.
